

# Variants of decomposition complexity in coarse geometry

Jerzy DYDAK

7. 6. 2017

## **Abstract**

I will outline various ways of dualizing concepts from topology to coarse geometry. In the case of paracompactness it covers joint research with Matija Cencelj and Aleš Vavpetič, past and present. The title is the same as of my talk in Eilat last month but the content is different with non-empty intersection.
