

Transitive points in dynamical systems with closed relations

Matic Simonič

Seminar za geometrijsko topologijo, 25.10.2023 & 8.11.2023

In the seminar we generalize the notion of transitivity and transitive points from topological dynamical systems to topological dynamical systems with closed relations. We introduce notions of different types of transitive points, different types of dense orbit transitivity as well as the transitivity of dynamical systems with closed relations.
