

Knots and other entanglements in proteins

Bartosz Greń
SGT, 15.11.2023

During the seminar I will introduce you to non-trivial topology types occurring in proteins: knots, links, lassos, theta-curves, handcuffs. I will tell you about protein structure, how non-trivial shapes can occur in proteins, and show some interesting examples of protein topology. Moreover, I will show you some results of statistical analysis of these topologies in ideal polymers.
